# Abstract

The research paper highlights the need for a development of an online platform using targeted towards solving the communication issue of master's degree student. In the field of innovations, there is a limited or no bank of useful links and materials that allow to form a general understanding of innovative activity for the master students. There is a need to create an internet environment where the results of analysis of master's students and the information related to their research on innovative subject are organised. The authors conclude that it is necessary to create a special Internet environment for this category of trainees. The structure and implementation of the environment are justified.

# Objectives

- To provide platform for communication for master's degree students, realizing the Internet socialization potential in the educational process, which can be used in open education technologies .
- To deliver a functional website which is targeted towards master's degree students which will enable them to communicate , collaborate and discuss their research and analysis results with like minded individuals which are working on a related domain/topic as they are .
- Understand latest web technologies (html , css , php , javascript)

# Benefits for Society and Environment

- Creates new ways for Learning and networking
- Provides an online platform for students to express themselves.
- Broad platform that students can connect with anyone in the world
- Communication and collaboration
- Finding Concrete Information Online
- Knowledge Creation and Knowledge Sharing
